

IFRA MUNAWAR

Software Engineer | MERN Stack Developer

Kasur, Pakistan | 0306-7573838 | codecraftbyifrah@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Computer Science graduate currently working as a Software Engineer Intern at FOLIO3, with hands-on full-stack MERN development experience. Skilled in React.js, Node.js, Express.js, and MongoDB, with practical experience architecting and deploying a complete e-commerce platform with real-world engineering challenges.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), Python, SQL

Frontend: React.js, JSX, Context API, Zustand, HTML5, CSS3

Backend: Node.js, Express.js, REST APIs, MVC Architecture

Database: MongoDB, Mongoose

APIs & Authentication: REST API Integration, JWT, bcrypt

Tools: Git, GitHub, VS Code, Postman, Multer, Nodemailer

AI/LLM (Additional): Prompt Engineering, OpenAI API, Google Gemini API, Anthropic Claude API

PROFESSIONAL EXPERIENCE

Software Engineer Intern — FOLIO3

Current

- Built and deployed a full-stack e-commerce frontend in React.js, applying component-based architecture, reusable UI components, and client-side navigation.
- Implemented global state management using Context API and Zustand, and managed component behavior with React Hooks (useState, useEffect).
- Developed backend services with Node.js and Express.js, designing a complete REST API routing structure for user, product, and authentication endpoints using the MVC pattern.
- Integrated MongoDB for data persistence and implemented authentication using JWT with bcrypt password hashing.
- Implemented file/image upload handling using Multer and integrated backend REST APIs with the React frontend for full-stack data flow.

PROJECTS

NOVEXA — Full-Stack E-Commerce Platform

React | Node.js | Express | MongoDB | Cloudinary | Nodemailer | Safepay

- Architected a scalable backend using a layered structure (routes → controllers → services → models) with dedicated middleware and validation layers, improving maintainability and testability.
- Resolved a race condition in the order-placement flow using MongoDB's atomic findOneAndUpdate operations, preventing overselling on limited-stock items during concurrent purchases.
- Implemented a complete order lifecycle with status tracking, cancellation, and automatic stock restoration, enforcing state-machine rules to prevent invalid transitions.
- Built an admin dashboard supporting full product CRUD operations, order management, and real-time inventory control.
- Designed a stock-aware shopping cart with real-time availability updates, and integrated Cloudinary, Nodemailer, and Safepay for image hosting, order emails, and secure payments.
- Added backend-driven search and filtering, a review/rating system with duplicate-prevention logic, a wishlist feature, and JWT-based authentication with token expiration.

Smart Lecture Scheduling System

Node.js | Express.js | MongoDB | JavaScript | HTML | CSS

- Designed and developed a full-stack web application that automates lecture scheduling for educational institutions.
- Implemented secure authentication with role-based access control and automatic timetable conflict detection.
- Integrated automated email notifications using Nodemailer.

EDUCATION

Bachelor of Science in Computer Science

Government College University, Faisalabad | 2021 – 2025 | CGPA: 3.60/4.00

Intermediate in Pre-Engineering (FSC)

PIASS | 2019 – 2021
